CAMS-PM Mobile ROI in five major areas:

- Provides Real Time Documentation
- Facilitates Informed Decision Making
- Reduces Secretarial Duties
- Expedites Managerial Duties
- Eliminates Data Entry Errors

The CAMS-PM Mobile Return on Investment:

Eliminates Data Entry Errors
CAMS-PM Maintenance Management contributes to efficient resource management by providing capabilities like real-time work assignment, manager sign off, time logs, attachable instructions/images. Removing the extra steps of data entry eliminates the time lag between issues found and generating the information necessary for decision making.

Expedites Managerial Duties
KLEANZ Mobile ensures that managerial duties such as scheduling or reviewing labor hours, are done quickly with the tap of a button - schedule changes and create time-sensitive jobs on the plant floor. This functionality expedites managerial duties, without compromising quality.

Reduces Secretarial Duties
CAMS-PM Mobile saves time and money by eliminating non-value-add labor: paper pushing, documenting duplicate information, digitizing handwritten data, and manually sorting documents.

Facilitates Informed Decision Making
CAMS-PM helps operations convert data into information. In CAMS-PM Mobile, data is tracked and trended into dashboards to visually inform decision makers and reduce the time and effort between decisions and action taken.

Provides Real Time Documentation
KLEANZ Mobile operates paperlessly with instant reporting functionality. Personnel can act in a moment's notice whether it is signing off on a completed task or entering a corrective action. All documentation entered can be easily viewed, sorted, and reported upon.
