

What is CAMS-PM?

The Complete Integrated Maintenance Management Tool for Food Manufacturing

CAMS-Preventative Maintenance is the only Maintenance Management system on the market that is specifically designed for food and beverage manufacturers. CAMS-PM tracks maintenance inspections and work orders and ties them to important Maintenance and Food Safety Key Performance Indicators. CAMS-PM is designed with FSMA requirements in mind; providing the necessary tools to achieve total Food Safety compliance (such as FSMA Zones and AIB Categories). CAMS-PM is built to integrate with KLEANZ in order to provide the complete solution for tracking and trending your operation's every action. CAMS-PM has three major levels of functionality:

CAMS-PM Mobile - Data collection on the Plant Floor

- Perform inspections, schedule & log work tasks, and request work orders
- Assign work on the fly and review the status of each task
- View assigned work including the related SOPs, photos, and safety guidelines
- Track measurements including inventory cycle counts, running hours, amp levels, and more

CAMS-PM Desktop – Planning/Scheduling, Reporting & Inventory Control

- Manage resources by planning PMs, work orders, and schedules to improve OEE
- Take control of your Parts Room to streamline Purchasing and Inventory Management
- Track training and certification of your team members

CAMS-PM Dashboard - Track and Trend your Maintenance Performance

- Ensure corporate consistency by tracking Key Performance Indicators (such as PM Completion Percentage, Downtime Percentage, Inventory Levels, and more)
- Measure the performance of your organization by facility, business unit, region, and more
- Create automated email/SMS reports based on specific tasks, date ranges, employees, audits/compliances, and more
